Отчет по лабораторной работе №6 По курсу: Разработка интернет-приложений

Выполнил Студент гр.ИУ5-51 Ефремов Николай

В этой лабораторной работе вы познакомитесь с популярной СУБД MySQL, создадите свою базу данных. Также вам нужно будет дополнить свои классы предметной области, связав их с созданной базой. После этого вы создадите свои модели с помощью Django ORM, отобразите объекты из БД с помощью этих моделей и ClassBasedViews.

Для сдачи вы должны иметь:

- 1. Скрипт с подключением к БД и несколькими запросами.
- 2. Набор классов вашей предметной области с привязкой к СУБД (класс должен уметь хотя бы получать нужные записи из БД и преобразовывать их в объекты этого класса)
- 3. Модели вашей предметной области
- 4. View для отображения списка ваших сущностей

```
Test.py
import MySQLdb
db =
MySQLdb.connect(
host='localhost',
user='root',
passwd='1234',
db='first db'
c = db.cursor()
c.execute('insert into office (named,location)VALUES (%s,%s);', ('Sales
office', 'Moskow, Lenina, 15/1')) db.commit()
c.execute('select * from office;')
entries = c.fetchall() for e in
entries:
    print(e)
c.close()
db.close()
```

```
